ART UNIT

PAPER NUMBER

2191

DATE MAILED: 06/19/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/044,614

Applicant(s)

HOEFLINGER ET AL.

Examiner

Qamrun Nahar

Art Unit

2191

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 March 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 and 24-30 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 and 24-30 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to the amendment filed on 3/7/06.
2. The objection to the disclosure is withdrawn in view of applicant's amendment.
3. Claims 1-22 and 24-30 are pending.
4. Claims 1-22 and 24-30 stand finally rejected under 35 U.S.C. 102(b) as being anticipated by Poulsen (U.S 5,812,852).

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-22 and 24-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Poulsen (U.S 5,812,852).

Per Claim 1:

The Poulsen patent discloses:

- a method comprising: receiving a first program unit in a parallel computing environment having a team of parallel threads including at least a first and second thread, the first program unit including a memory copy operation to be performed between the first thread and the second thread (column 4, lines 62-67)

- translating the first program unit into a second program unit, the second program unit to associate the memory copy operation with a set of one or more instructions, the set of instructions to ensure that the second thread copies data based, in part, on a first descriptor associated with the first thread (column 4, line 67 to column 5, lines 1-20; and column 6, lines 64-67 to column 7, lines 1-6; a new pointer variable is declared for the new compound object, and any reference to the new compound object is made via the new pointer variable. That is, the new pointer variable is interpreted as the first descriptor associated with the first thread.)

- and copying an address of the first descriptor to a two address buffer (“Step 500 allocates storage in global memory for a new private object descriptor that will hold information about this particular piece of privatized storage for the current thread id. Step 510 allocates thread-private storage for the object and the current thread id with the same size, in bytes, as the global storage object. Step 520 initializes the private object descriptor allocated in step 500 with the address of the storage allocated in step 510” in column 10, line 61 to column 11, line 4; Step 510 allocates thread-private storage for the object. Each thread has thread-private storage. Multiple threads have multiple thread-private storages. That is, multiple thread-private storages are multiple temporary storages for the object. Multiple temporary storages are interpreted as multiple address buffer. For example, if there are two threads, then there would be two address buffer.)

Per Claim 2:

Art Unit: 2191

The Poulsen patent discloses:

- further comprising copying data into a memory area associated with the second thread based, in part, on address and data information associated with the first descriptor (column 5, lines 11-20).

Per Claim 3:

The Poulsen patent discloses:

- further comprising copying data into a memory area associated with second thread utilizing, in part, a second descriptor associated with the second thread (column 6, lines 64-67 to column 7, lines 1-6).

Per Claim 4:

The Poulsen patent discloses:

- further comprising enabling the first thread to copy an address of the first descriptor to a buffer and setting a signal to enable the second thread to copy data associated with the first descriptor to a memory area associated with the second thread (column 6, lines 64-67 to column 7, lines 1-6).

Per Claim 5:

The Poulsen patent discloses:

- **further comprising enabling the first thread to enter a wait state after the signal is set** (column 6, lines 64-67 to column 7, lines 1-6).

Per Claim 6:

The Poulsen patent discloses:

- **further comprising releasing the first thread from a wait state upon completion of the data copy operation by the second thread** (column 6, lines 64-67 to column 7, lines 1-6).

Per Claim 7:

The Poulsen patent discloses:

- **further comprising enabling the first thread to copy an address the first descriptor to one of two buffer areas** (column 6, lines 64-67 to column 7, lines 1-6; and column 10, line 61 to column 11, line 4).

Per Claim 8:

The Poulsen patent discloses:

Art Unit: 2191

- further comprising receiving the first program unit in source code format and translating the first program unit into a second program unit in source code format (column 8, lines 28-39).

Per Claims 9-10, 11-15 & 17:

These are machine-readable medium versions of the claimed method discussed above (claims 1-8, respectively), wherein all claim limitations also have been addressed and/or covered in cited areas as set forth above. Thus, accordingly, these claims are also anticipated by Poulsen.

Per Claim 16:

This is a machine-readable medium version of the claimed method discussed above, claim 3, wherein all claim limitations also have been addressed and/or covered in cited areas as set forth above. Thus, accordingly, this claim is also anticipated by Poulsen.

Per Claim 18:

The Poulsen patent discloses:

- a method comprising: receiving a first program unit in a parallel computing environment and translating the first program unit, in part, into one or more computer instructions, the instructions enabling a second thread in a team of threads to copy data, into a memory area associated with the second thread, from a private memory area associated with a first thread (column 4, line 67 to column 5, lines 1-20)

- and copying an address of a descriptor into a two address buffer utilized by the second thread, in part, to copy data from the memory area associated with the first thread (column 5, lines 11-20; column 6, lines 64-67 to column 7, lines 1-6; and see also “Step 500 allocates storage in global memory for a new private object descriptor that will hold information about this particular piece of privatized storage for the current thread id. Step 510 allocates thread-private storage for the object and the current thread id with the same size, in bytes, as the global storage object. Step 520 initializes the private object descriptor allocated in step 500 with the address of the storage allocated in step 510” in column 10, line 61 to column 11, line 4; Step 510 allocates thread-private storage for the object. Each thread has thread-private storage. Multiple threads have multiple thread-private storages. That is, multiple thread-private storages are multiple temporary storages for the object. Multiple temporary storages are interpreted as multiple address buffer. For example, if there are two threads, then there would be two address buffer.).

Per Claim 19:

The Poulsen patent discloses:

- further comprising creating a descriptor utilized, in part, by the second thread to copy data into the memory area associated with the second thread (column 5, lines 11-14).

Per Claim 20:

The Poulsen patent discloses:

- further comprising setting a signal by the first thread enabling the second thread to copy the data from the memory area associated with the first thread (column 6, lines 64-67 to column 7, lines 1-6).

Per Claim 21:

The Poulsen patent discloses:

- further comprising entering a wait state by the first thread until the second thread copies the data from the memory area associated with the first thread (column 6, lines 64-67 to column 7, lines 1-6).

Per Claims 22, 24 & 25-28:

These are apparatus versions of the claimed method discussed above (claims 1-6 & 8), wherein all claim limitations also have been addressed and/or covered in cited areas as set forth above, including “a memory including a shared memory location” (column 8, lines 28-45).

Thus, accordingly, these claims are also anticipated by Poulsen.

Per Claim 29:

The Poulsen patent discloses:

- wherein the first descriptor is passed to the first program unit (column 8, lines 46-51).

Per Claim 30:

The Poulsen patent discloses:

- wherein the translation unit translates the first program unit, in part, into a second program unit in source code format and the second program unit includes the memory copy operation (column 8, lines 28-39).

Response to Arguments

7. Applicant's arguments filed on 3/7/06 have been fully considered but they are not persuasive.

In the remarks, the applicant argues that:

a) Poulsen fails to teach copying an address of the first descriptor to a two address buffer.

Examiner's response:

a) Examiner strongly disagrees with applicant's assertion that Poulsen fails to disclose the claimed limitations recited in claim 1. Poulsen clearly shows each and every limitation in claim 1.

Poulsen teaches copying an address of the first descriptor to a two address buffer ("Step 500 allocates storage in global memory for a new private object descriptor that will hold information about this particular piece of privatized storage for the current thread id. Step 510 allocates thread-private storage for the object and the current thread id with the same size, in

Art Unit: 2191

bytes, as the global storage object. Step 520 initializes the private object descriptor allocated in step 500 with the address of the storage allocated in step 510” in column 10, line 61 to column 11, line 4; Step 510 allocates thread-private storage for the object. Each thread has thread-private storage. Multiple threads have multiple thread-private storages. That is, multiple thread-private storages are multiple temporary storages for the object. Multiple temporary storages are interpreted as multiple address buffer. For example, if there are two threads, then there would be two address buffer.).

In addition, see the rejection above in paragraph 6 for rejection to claim 1.

Conclusion

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2191

9. Any inquiry concerning this communication from the examiner should be directed to Qamrun Nahar whose telephone number is (571) 272-3730. The examiner can normally be reached on Mondays through Fridays from 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wei Y Zhen, can be reached on (571) 272-3708. The fax phone number for the organization where this application or processing is assigned is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the TC 2100 Group receptionist whose telephone number is 571-272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
